Hi there 👋

You've seen the vibe.

Lo-fi music. Dark mode AI IDE. ChatGPT/Claude open on the side. Aesthetics on point.

And advice? *"Just vibe code & ship, bro. You'll figure it out."*

Except, you won't.

You build something. It works (kinda). But then…
✍️ You don't know why it works
✍️ You can't scale and secure it
✍️ You can't debug it when it breaks
✍️ You can't explain it in interviews
✍️ You start copying more… and understanding less.

Here me out **LOUD** and **CLEAR**,
*"Just Vibe and Ship" is not a strategy.*
*It's a fast track to being a copy-paste zombie* 🧟‍♂️

And trust me, the whole industry is *full* of people who make money by telling you that you don't need to learn much. Just prompt, vibe, ship, and pray it works.

**So wait — does that mean vibe coding or using AI is bad?**
Not at all
Instead:

- Learn the damn thing
- Practice & build real projects
- learn how to think like a dev—not just act like one.

Then you bring AI to boost your speed & productivity.
Then you vibe.
Then you ship.

But this time, you'll know what the hell you're doing and won't end up like this guy:

Now, you can continue to whine about it or start building.

P.S. Yes, people pay for it

· · ·

guys, i'm under attack

ever since I started to share how I built my SaaS using Cursor

random thing are happening, maxed out usage on api keys, people bypassing the subscription, creating random shit on db

as you know, I'm not technical so this is taking me longer that usual to figure out

for now, I will stop sharing what I do publicly on X

there are just some weird ppl out there

Got it?

Now, if you're done playing prompt jockey… And you're actually ready to **think like a developer** — not just act like one for aesthetics.

Check out JS Mastery Pro

It's built for devs who want to learn real skills, build real projects, and actually understand what the hell they're doing.

Best,
Adrian from JSM

**P.S.,** Say to everyone, "You ship vibes. I ship systems." 😊
